Category Import Export Extension Magento 2(2.0, 2.1, 2.2) – Installation Guide

Import Export extension can be installed in Magento store by following below methods:

Method 1:

Follow this method to install the Import Export extension in your Magento store if the Cron task is not set up in your Magento dashboard:

Steps to install the Import Export extension manually:

1. After the extension is purchased you would receive an email with a link to download the package zip file.
2. To install the extensions we should copy "Extension code" to the required Magento directory.
3. Create a directory 'Vgroup65/CategoryImportExport' under root directory '<magento install dir>/app/code/'.
   a. In case if you do not find the 'code' directory under '<magento install dir>/app/', so create the 'code' directory and then create 'Vgroup65/CategoryImportExport' under 'code' directory.

   The directory for the Import Export extension will be '<magento install dir>/app/code/ Vgroup65/CategoryImportExport'.

4. Unzip the package zip file of Import Export extension under '<magento install dir>/app/code/Vgroup65/CategoryImportExport/' directory.
5. Please make sure that you must be logged in as an administrative user on your Magento server using any command line interface application (ex: PuTTy).
6. Open the Magento command line interface and change the Magento root directory by entering 'cd /var/www/html/magento2/' command if the Magento root directory name is magento2. Command can be change based on the name of your Magento root directory.
7. After changing the path to Magento root directory on command line interface, run following commands:
   - 'php bin/magento setup:upgrade'
   - 'php bin/magento setup:di:compile'
   - 'php bin/magento setup:static-content:deploy'
8. Go to your Magento store admin dashboard > System > Cache Management.
9. Click 'Flush Magento Cache' and check Category Import Export in the left navigation menu.

Method 2:

You can use this method if the Cron task is already set up and running on your Magento store. Refer to the below link if the Cron task is not performing on your Magento store.

http://devdocs.magento.com/guides/v2.0/config-guide/cli/config-cli-subcommands-cron.html

Refer below steps to install the Import Export extension manually:

1. After the extension is purchased you would receive an email with a link to download the package zip file.
2. To install the extensions we should copy "Extension code" to the required Magento directory.
3. Create a directory 'Vgroup65/CategoryImportExport' under root directory '<magento install dir>/app/code/'.
   a. In case if you do not find the 'code' directory under '<magento install dir>/app/', so create the 'code' directory and then create 'Vgroup65/CategoryImportExport' under 'code' directory.

   The directory for the Import Export extension will be '<magento install dir>/app/code/ Vgroup65/CategoryImportExport'.

4. Unzip the package zip file of Import Export extension under '<magento install dir>/app/code/Vgroup65/CategoryImportExport/' directory.
5. From your Magento admin dashboard, go to System > Web Setup Wizard > Component Manager. In case of Magento 2.2.x, go to System > Web Setup Wizard > Module Manager.
6. Locate the 'vgroup65/categoryimportexport' under Component Name column and Select 'Enable' option from the Action dropdown.
7. Click 'Next' on 'Enable Vgroup65_CategoryImportExport' page and complete the process.
8. After enabling the module, go to Magento Dashboard > System > Cache Management.
9. Click 'Flush Magento Cache' and check Category Import Export in the left navigation menu.
